LA English  
AB The gustatory responses of pigs to 60 compds. perceived as sweet by humans were studied via a semi-quant. behavioral method derived from the Richter two-bottle preference test. Among the 60 compds. tested 35 are effective in pigs, but with an effectiveness much lower in pigs than in humans. Lugduname and carrelame, which are the two most potent sweeteners in humans, are also the most effective compds. in pigs.

OS CASREACT 134:223039  
 AB This document discloses the following : a method for industrially producing N-[N-[3-(3-methoxy-4-hydroxyphenyl)propyl]-L- $\alpha$ -aspartyl]-L-phenylalanine 1-Me ester which is useful as a sweetener, in particular, a process for producing the target compound in a high yield by the reductive alkylation reaction of aspartame with 3-(3-methoxy-4-hydroxyphenyl)propionaldehyde or its derivative; a method of effectively purifying the target compound contaminated with impurities invading thereinto at various production stages (involving methods other than the above-described reductive alkylation), more particularly, a method of separating the target compound in the form of highly pure crystals; the crystals;  
 sweeteners containing the same; and utilization thereof in various products which are to be sweetened.

 AB The gustatory responses of pigs to 60 compds. perceived as sweet by humans were studied via a semi-quant. behavioral method derived from the Richter two-bottle preference test. Among the 60 compds. tested 35 are effective in pigs, but with an effectiveness much lower in pigs than in humans. Lugduname and carrelame, which are the two most potent sweeteners in humans, are also the most effective compds. in pigs.

GI

AB Described is an industrial process for conveniently and efficiently producing highly pure cinnamyl aldehyde derivs. (I; R = H, C1-4 alkyl or alkoxy) such as (2E)-(3-hydroxy-4-methoxy)cinnamyl aldehyde which comprises reacting a benzaldehyde derivative (II; R = same as above) (for example, isovanillin) with acetaldehyde in the presence of an alkali, preferably adding acetaldehyde in portions in an aqueous solution at a low temperature

The cinnamyl aldehyde derivs. (I) thus obtained are selectively reduced into 3-(3-hydroxy-4-substituted phenyl)propionaldehydes (III; R = same as above). These compds. III are further subjected to reductive alkylation with aspartame to efficiently give N-[N-[3-(3-hydroxy-4-substituted

phenyl)propyl]-L- $\alpha$ -aspartyl]-L-phenylalanine 1-Me esters (IV; R = H, C1-4 alkyl or alkoxy), which are useful as sweeteners with high sweetness. Thus, 121.72 g isovanillin and 320 g NaOH were dissolved in 2,000 mL H<sub>2</sub>O and cooled to -10°, followed by continuously adding 290 g 28 weight% aqueous acetaldehyde over a period of 45 h, and the resulting mixture was stirred for 1 h, treated with 768.1 g 36 weight% aqueous HCl, and filtered to give 324 g crystalline product. The latter product was dispersed in 500 mL H<sub>2</sub>O at 25°, treated with 97.5 g 25 weight% aqueous NaOH for dissoln., stirred with 4 g activated charcoal and 16 g celite, and filtered. The filtrate was neutralized with 55.4 g 36 weight% aqueous HCl to give 185.5 g crystalline product

which was vacuum-dried, dispersed in 275 mL MeOH at 60°, stirred for 2 h, cooled to room temperature, and filtered to give, after drying the wet crystals, 83.2 g (2E)-3-hydroxy-4-methoxycinnamaldehyde (98% purity) in 57% yield. The latter compound (5.00 g) and 300 mg 5% Pd-Al<sub>2</sub>O<sub>3</sub> were added to 80 mL MeOH and stirred under H atmospheric at 35° for 24 h, followed by filtration for removal of the catalyst and washing the catalyst with 10 mL MeOH, to give a MeOH solution of 3-(3-hydroxy-4-methoxyphenyl)propionaldehyde (87% yield). The latter solution (8.15 g) containing 1.50 g of the aldehyde

and

2.57 g aspartame were added to a 4:1 mixture of MeOH and H<sub>2</sub>O, followed by adding 0.7 g 10% Pd-C containing 50% H<sub>2</sub>O, and the resulting mixture was stirred at 35° under H atmospheric for 48 h to give 71% N-[N-[3-(3-hydroxy-4-methoxyphenyl)propyl]-L- $\alpha$ -aspartyl]-L-phenylalanine 1-Me ester.

AB This document discloses a process for conveniently producing on an industrial scale in high yield N-[N-[3-(phenyl)propyl]-L- $\alpha$ -aspartyl]-L-phenylalanine 1-Me ester derivs., which are expected to be sweeteners, by reductively alkylating aspartame with 3-phenyl-2-propenyl aldehyde

derivs. under hydrogen in the presence of a catalyst and a base.

AB Industrial and efficient processes for producing aspartyl dipeptide ester derivs. of general formula (I; R1-R5 = H, OH, C1-3 alkoxy, C1-3 alkyl, benzyloxy, C2-3 hydroxyalkyloxy; or R1 and R2 or R2 and R3 together represents methylenedioxy), which are expected to serve as sweetener (no data), comprise reductive alkylation of aspartame with propionaldehydes or cinnamaldehydes of general formulas (II) and (III) in the presence of a catalyst. Particularly, described are an industrial and efficient process for producing N-[N-[3-(3-hydroxy-4-methoxyphenyl)propyl]-L-aspartyl]-L-phenylalanine 1-Me ester (IV) which is excellent as high sweetener; useful, and advantageous intermediates for the process; and efficient processes for producing the intermediates. Thus, 5.89 g aspartame and 3.42 g 3-(3-hydroxy-4-methoxyphenyl)propionaldehyde (preparation given) were added to 200 mL 80% aqueous methanol, stirred at 40° for a while, and hydrogenated in the presence of 1.78 10% Pd-C at 0.1 M Pa and 40° for 40 h to give 78.9% IV.

I

AB Title dipeptides I ( $R_1-R_5 = H, OH; \geq 2$  of  $R_1-R_5 = OH; R_6, R_7 = H, C1-3 alkyl$ ) or their salts are prepared. Thus,  $\beta$ -O-benzyl-L- $\alpha$ -aspartyl-L-phenylalanine Me ester was treated with 3-(2,4-dibenzoyloxyphenyl)-2-propenylaldehyde in the presence of NaB(OAc)<sub>3</sub>H in AcOH to give N-[N-[3-(2,4-dibenzoyloxyphenyl)-2-propenyl]- $\beta$ -O-benzyl-L- $\alpha$ -aspartyl]-L-phenylalanine 1-Me ester, which was hydrogenated over Pd/C to afford I ( $R_1 = R_3 = OH, R_2 = R_4 = R_5-R_7 = H$ ). The product tasted 10,000 times sweeter than sucrose.

OS CASREACT 134:223039

AB This document discloses the following : a method for industrially producing N-[N-[3-(3-methoxy-4-hydroxyphenyl)propyl]-L- $\alpha$ -aspartyl]-L-phenylalanine 1-Me ester which is useful as a sweetener, in particular, a process for producing the target compound in a high yield by the reductive

alkylation reaction of aspartame with 3-(3-methoxy-4-hydroxyphenyl)propionaldehyde or its derivative; a method of effectively purifying the target compound contaminated with impurities invading thereinto at various production stages (involving methods other than the above-described reductive alkylation), more particularly, a method of separating the target compound in the form of highly pure crystals; the crystals; sweeteners containing the same; and utilization thereof in various products which are to be sweetened.

OS MARPAT 131:272186

AB Novel aspartyl dipeptide ester derivs. (including those in the form of a salt) having an excellent sweetening effect and usable as sweeteners such as N-[N-[3-(3-methyl-4-hydroxyphenyl)propyl]-L- $\alpha$ -aspartyl]-L-phenylalanine 1-Me ester and N-[N-[3-(3-hydroxy-4-methoxyphenyl)propyl]-L- $\alpha$ -aspartyl]-L-phenylalanine 1-Me ester (I) are prepared. Thus, I was prepared from N-tert-butoxycarbonyl- $\beta$ -O-benzyl- $\alpha$ -L-aspartyl-L-phenylalanine Me ester and 3-benzyloxy-4-methoxycinnamaldehyde. I was 20,000-times sweeter than sucrose.
